

## Industry 4.0 is focus of Tube Russia, Metallurgy Russia and Litmash Russia 2019

THE Russian metal trade fair trio Tube Russia, Metallurgy Russia and Litmash Russia took place at the Moscow exhibition centre Krasnaya Presnya in May. 270 companies from 20 countries presented technological innovations and solutions for the requirements of Industry 4.0. After Russia and its neighbouring Eastern European

countries, exhibitors primarily came from Italy, Germany, the UK, Belgium, Austria, Finland, Spain, Switzerland and Turkey. Companies from the USA, India, China and Brazil also travelled to the Moscow Expocentre.

Whether they were interested in machinery or solutions for the casting and processing industries, metallurgical processes, or current technologies in the areas of pipe production, pipe processing and pipe machining, trade visitors were able to discover a wide range of products and services at the three trade fairs over four days.

New process developments in the field of ferrous and non-ferrous metals, as well as current equipment and

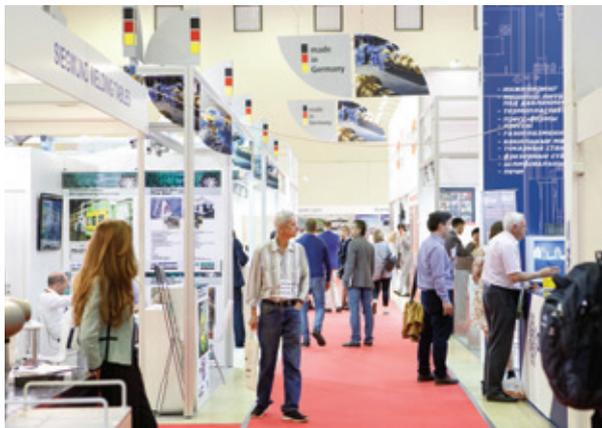

products for foundry machines, welding, cutting and joining, metallurgical processing and the large tube industry, were presented by both Russian and international companies.

The Tube Industry Development 2019 Seminar, organised by the International Tube Association in cooperation with Messe Düsseldorf, focused on current solutions in the tube industry.

## Leading trade fairs wire and Tube sponsor the first CRU Conference in South Africa

AFRICA's enormous oil and gas reserves, numerous copper mines, large aluminium deposits and expanding regional steel industry have moved the continent into the focus of international investors more than ever.

Ambitious infrastructure projects fuel the local economies, which, in turn, seek foreign know-how for implementing these measures.

International manufacturers of machinery and equipment for the wire and cable industries and the producers of tube making and finishing machines are therefore highly sought-after partners for industry. Wires, cables and tubes are required in mining and the energy sector and in infrastructure.

This has led to Messe Düsseldorf, the organiser of the world's biggest trade fairs for wire, cable and tube – wire and Tube – to become a sponsor in the Africa Wire, Cable & Tube Conference, held for the first time by the British

organiser CRU in cooperation with AHK, the German Chamber of Industry and commerce for Southern Africa, in South Africa from 11 to 13 November 2019. The inaugural conference will be held at the Emperor's Palace, Johannesburg.

The conference aims to bring together local suppliers and international experts

to discuss future joint investment and ventures. The current investment climate, as well as the political framework and economic conditions, will be illustrated and discussed by local and international experts and will serve as a decision-making tool for potential foreign investors interested in Africa's industries.

Principal organiser CRU has more than 50 years of experience interacting with a growing international network and has in the past organised conferences in the segments metal, mining, fertilisers and more.

Messe Düsseldorf boasts 70 years of experience acquired in the organisation and running of B2B and B2C fairs. For 60 years it has also organised trade fairs and events around the world.
